As much as the Coronavirus pandemic is a major story about economics, public health, or politics, it’s also a human story. Weeks of quarantines and isolation stretched into months, presenting a whole range of emotions that Americans had to deal with. Now that states are trying to reopen many of their “non-essential” businesses in a scattershot fashion, consumers’ feelings once again run the gamut from fear to excitement to uncertainty.

Many people have come to realize how much they took for granted in their normal, pre-COVID lives, including how important it is to gather with other people — and to have a place to do that gathering, like a local restaurant.

At this point in time, where do consumers fall when their anxieties over the health of their families and communities run into real economic concerns felt throughout the country? Often their feelings are informed by their view on how the public-health crisis compares in importance the economic one, but restaurants can still find ways to address that tension through service and outreach that stresses community building.

Here are highlights from Datassential’s latest wave of Coronavirus research, fielded April 24 with 1,000 US consumers.
April 24
FDA approves first at-home COVID-19 test kit
Vice President Pence says more than 5 million Americans have received a Coronavirus test

April 25
No evidence that people who had Coronavirus are immune from second infection, WHO warns
US should double its testing over next several weeks, Fauci says
FDA authorizes three more Coronavirus antibody tests

April 26
Pentagon focusing on most vital personnel for virus testing
367 people die from Coronavirus in New York over 24-hour period
Birx says the US needs “breakthrough” in testing to help screen large numbers of people

April 27
President Trump announces new Coronavirus testing and guidance on reopening states
More than 985,000 Coronavirus cases reported in the US
New York state cancels its presidential primary election
Meat shortage and China deals send Beyond Meat’s stock spiking
More than 3 million Coronavirus cases reported worldwide
Coronavirus concern has plateaued.

With cases still growing in some places and no big breakthroughs on the testing front, almost two-thirds of Americans are very worried about their own personal health.
Avoidance of eating out is steady but starting to soften. As a few states start to reopen restaurants for dining in, avoidance is beginning to show signs of decreasing. While overall numbers have been steady for the past week, many consumer segments are showing significant dips, including younger generations, singles and households with kids. Boomers are the only group trending up in avoidance, likely fearful of greater spread as restaurants reopen.
Efforts to jump-start the economy ignite greater health concerns among consumers.

COVID cases continue to grow, and the health crisis remains Americans’ top concern. While the economy is still a major issue, as some states slowly begin to reopen, worries over public health have risen four points in the past five days. This is consistent with recent Datassential study results in which Americans felt May 1 was too soon to start “reopening” the economy.
Most Americans are still stuck at home.

Which of the following best describes your current situation?

- 15% Still going to school/work as normal
- 17% Laid off / furloughed
- 31% Not working overall
- 37% Working or attending school remotely
COVID has created a struggle between self-preservation and the need for community.

Normal actions we took for granted, like gathering with other people, now have the potential to be fatal. While it has been scary to deal with from the safety of our homes, as the country slowly reopens, anxiety still grows. At the same time, we long to be socially connected to our communities again after months of isolation. As we navigate these new waters, we'll be driven by the excitement to celebrate a return to everyday life, tempered by a deep-seated need to stay safe.

Restaurants can help ease this tension for diners in several ways. This could mean providing a safe, yet fun socially-distanced meal. Or on a more emotional, human level, it could be letting diners know that their patronage ultimately helps others, as restaurants assist their communities, whether through supporting staff, feeding first responders, or generally restarting the local economy.
COVID-19 is a human moment that has brought some Americans closer to one another.

Despite the political divide, with a shared national emergency, some people feel we have become more united as a country. This sentiment grew from the lowest levels for Gen Z to the highest for Boomers, about two-thirds of whom say the Coronavirus pandemic has brought us closer together as a nation.

44% COVID-19 HAS DRIVEN AMERICANS APART

56% COVID-19 HAS BROUGHT AMERICANS CLOSER

Which statement do you agree with more?
Slowly venturing out, but at a safe distance.

While most Americans are apprehensive about the reopening of non-essential businesses, they favor people visiting open-air locations like parks and beaches, where they can keep social distance. As you might expect, people who are currently more concerned about the economic crisis are much more accepting of visits to all types of venues than those more concerned about public-health implications. Having guidelines in place for reopening and familiarity with grocery store precautions have likely also paved the way for other retailers. One-third of Americans are OK with visits to places like shopping malls, hair salons, and restaurant dining rooms.
Dining in ties people back to pre-COVID life.

People miss dining in restaurants, not just for the food, but also for the psychological benefits. When dining rooms reopen, there will be a heightened appreciation for them and the sense of normalcy they evoke. Americans associate dining in with better pre-COVID times and happy “milestone” celebrations. Restaurants will also provide an opportunity for people to do their part and reconnect with their communities.

COVID will leave some more grateful and introspective.

It’s hard to go through a crisis like COVID and not be impacted on a personal level. People will change, not so much in how they treat others, but more in how they view the world. Some will be more grateful for the “little things,” others would prepare for a second wave of COVID. A minority do see themselves becoming more empathetic toward others, whether that comes in the form of a “thank you” to restaurant staff or being more supportive of “the mom and pop” local eateries.

More prevalent among Boomers (28%)

More prevalent among Gen Z (23%)

More prevalent among Gen Z (22%)

which of the following do you see yourself doing more of as a result of the coronavirus crisis?

- More grateful for things I took for granted: 43%
- More prepared in case this happens again: 32%
- Supporting grocery store and restaurant workers: 26%
- Supporting independent restaurants: 25%
- More empathy for others who are struggling: 25%
- Making more effort to spend time with family: 24%
- Supporting “made in the USA” food producers: 21%
- Supporting local food resources: 18%
- Being more considerate with strangers: 18%
- Going out to socialize with people: 14%
- Having more faith in humanity: 14%
- Being more charitable: 14%
- None: 8%
Yet many of us are in self-preservation mode.

The COVID crisis affects all aspects of life, but people are most consumed with issues that directly impact their well-being. With staying healthy and stopping the spread still top-of-mind, consumers are most apprehensive around issues related to reopening non-essential businesses too soon. While still important, COVID’s impacts on other issues like data protection, civil liberties, and the environment take a backseat to health-related fears. Americans that prioritize the economic crisis, however, show significantly less concern over severity of the virus and risks to public health.

Thinking about how COVID has shaped how you feel, do you agree or disagree with the following?
Restaurants will be a light in the darkness.

Familiar comforts will help consumers unwind when they return to their favorite establishments. For many, dining out will provide a well-needed boost once things move more toward a state of normalcy, so operators and their team members can focus service on eliciting relaxation, joy, satisfaction, and a sense of indulgence — all while maintaining cues about the safety of the environment in the dining room.

which are you most looking forward to regarding the emotional benefit you get from eating at restaurants?

More prevalent among Boomers (52%).

More prevalent among Millennials (29%).

More prevalent among Gen Z (14%).
Charitable acts are the silver lining.

They say there’s always some good that can come from a bad situation, and the Coronavirus crisis is no exception. When it comes to food, America is most moved by charitable efforts to feed the hungry and those that support restaurants and their staff.

Seeing Americans feed people in need: 43%
Seeing restaurants support their staff: 37%
Seeing my community support local restaurants: 35%
More family-focused mealtimes: 29%
Exploring and learning new recipes: 22%
Experiencing new ways to get food: 21%
Get take-out from places where hard to get reservations: 15%
New "family meals" from restaurants: 14%
Availability of "comfort foods" that I love: 13%
Trying new restaurants I wouldn't have ordered from: 12%
None: 12%
Starting a new diet: 11%
Getting to know food workers: 11%

Which three of the following are the most positive food related outcomes to come from COVID-19 and social distancing?
WHICH BRANDS OR COMPANIES ARE “BEST EXAMPLES” OF HOW COMPANIES SHOULD STEP UP IN RESPONSE TO COVID?

“Shake Shack giving back their 10 million loan.”
- a 31-year-old man in Houston, TX

“Apple making face shields and donating masks and money.”
- a 36-year-old male in Oak Lawn, IL

“US manufacturers who immediately turned their factories into places that are making PPE, gloves, gowns and ventilators like GE, Ford and Tesla.”
- a 64-year-old woman in Fernandina Beach, FL

“Local brewery quit making beer to make hand sanitizer for both of our local hospitals.”
- a 60-year-old woman in Meridian, ID

“Auto insurance companies are lowering premiums because people aren’t driving.”
- a 74-year-old woman in Del Ray Beach, FL

“My local bread bakery (Great Harvest) has started a program where people can pay the bakery to make food which is donated to the local food shelter.”
- a 24-year-old man in Warrenton, VA

“Target and Walmart have donated supplies to families affected by a job loss.”
- a 63-year-old woman in Eastern, TX

“Albertson’s, Walmart, Smith’s, and Whole Foods for changing their operating hours for cleaning, sanitizing, and restocking. Also allowing special hours for seniors most at risk.”
- a 76-year-old man in Hillsboro, OR

“Publix buying directly from farmers and donating it to food banks. The Restaurant Relief Fund awarding $500 grants to restaurant workers who have lost their jobs.”
- a 42-year-old woman in Decatur, GA
